Fullstack Developer | ML Practitioner | AI Integration

- As a Full-Stack Developer, I specialize in creating web applications that integrate both front-end and back-end technologies. On the front end, I use React to build dynamic, responsive interfaces with efficient state management using Zustand. My design skills ensure these interfaces are both functional and visually appealing.
- On the back end, I develop scalable server-side applications with Express and PostgreSQL, focusing on building robust APIs for seamless data communication. My experience allows me to create web applications that are scalable, maintainable, and adhere to best practices using modern technologies.
- Alongside my full-stack development skills, I'm actively expanding into machine learning, particularly in supervised learning, where I leverage labeled datasets to build models for tasks like speech recognition and data classification, with a focus on real-world applicability and language-specific solutions.
- Motivated and detail-oriented with a strong foundation in computer science and practical experience in data organization, research, and digital systems. Adept at working with spreadsheets, web tools, and online platforms. I'm eager to support any operation with accurate data entry, market research, and task coordination.

Fullstack Software Development

05/2024 - 08/2024

Teach2Give

PROJECTS

MUTC Landing Page

- Built a responsive landing page using React.js, ensuring a smooth user experience across devices.
- Leveraged React Hooks like useState and useEffect for state management and side effects, improving performance and maintainability.

- Integrated CSS modules for scoped and maintainable styling, reducing the likelihood of class name conflicts.

Live Transcription Model

- Built a real-time transcription system tailored for Luhya family names using OpenAI's Whisper as the pretrained ASR model.
- Engineered a Python-based ASR backend to process audio inputs and generate transcriptions efficiently.
- Designed a React.js frontend interface to capture audio from users and display live transcriptions, enhancing user interaction.
- Implemented a Node.js server to manage API requests and facilitate seamless communication between the client and the ASR model.
- Structured the project into modular components: `asr_model` for the ASR logic, `client` for the user interface, and `server` for backend operations, ensuring maintainability and scalability.

Quiz Application

- Designed and developed a full-featured quiz application using React.js for a dynamic and interactive user experience.
- Implemented Zustand for state management, allowing for seamless data flow between components and efficient handling of quiz data.
- Incorporated RESTful API calls to fetch and manage quiz questions and user data, ensuring up-to-date content and smooth user interaction.

SKILLS

Technical Skills:

Frontend: React.js, HTML, CSS, JavaScript (ES6+), Responsive Design

Backend: Node.js, Express.js, RESTful APIs, PostgreSQL, Prisma ORM

State Management: Zustand

Machine Learning / AI: Natural Language Processing (NLP), OpenAI Whisper API, Speech Recognition, Data Labeling, Supervised Learning

UI/UX Design: Wireframing, Prototyping, User-Centered Design

Deployment: Vercel

Version Control: Git, GitHub

Data Handling: Data entry, Data cleaning, information research, Basic data validation

Soft Skills:

Strong attention to detail, Adaptability, Collaborative Teamwork, Excellent Communication, Problem Solving, Quick learner
